

Candidates Home Assignment

iOS

The task

1. Create an app.
2. The app's root controller should display a button, which leads to an 'articles controller'.
3. When the button is pressed, fetch the attached json contents from the web (<https://cdn.theculturetrip.com/home-assignment/response.json>) and build 'Article' objects from the JSON response.
4. Display the objects to match the attached design in the 'articles controller'.
5. when we hit the 'back' from the 'articles controller', all the 'articles' are cleared, and user will navigate to the root controller.

Make sure the app supports the following

1. Article title should be dynamic (i.e. support 'n' lines).
2. fetching the JSON should not block the UI.
3. Image loading should be performed asynchronously.

General instructions

1. You can use any 3rd party library to complete the task.
2. Task should ~1 hour.

Submission

1. Provide a link to a git repository, with a project ready to be cloned and build.
